

Logistics: Customer Journey Map

This is the journey of a
Game-Changer

Game changers are people who introduce new practices to their organizations. They want inspire others to co-create and innovate together.

What are their key goals and needs?

- Be proactive rather than reactive
- Fix issues before it costs them millions
- Quickly triage and assess the issue

What do they struggle with most?

- Real-time alerts
- Identifying sensor location
- Assign cases to team members for triage

What tasks do they have?

- Trying to find issues before they arise
- Gaining visibility to their assets and workflow
- Benchmark performance

Journey Steps Which step of the experience are you describing?	Discovery Users are alerted via notifications to an issue that has arisen via escalation rules	Diagnosis Users sign in and see the notification as a top priority item on the dashboard	Resolution Users are given information into the location, history, and current status of the sensor in question and those surrounding it	Sharing Users generate reports for upper management, identify issues and patterns, etc.
Actions What does the customer do? What information do they look for? What is their context?	Customer is out on the field working or at their computer when they receive a notification via text or email	Review the dashboard to find the notification Pull up details of the notification Look into sensor, it's history and the sensors around it	User heads over to sensor to manually fix the issue User triages the issue to the proper technician nearby User looks into history to see if there is a pattern for prevention User creates more escalation rules to prevent future issues	Generate reports for management and executives to see resolution Analyze history to see if this is a recurring issue and how to prevent it from being an issue in the future Activity log in case an audit of this case is needed
Needs and Pains What does the customer want to achieve or avoid? <i>Tip: Reduce ambiguity, e.g. by using the first person narrator.</i>	Make sure the right person is receiving the alert Real time response so that they can prevent errors and loss of revenue	What is causing the sensor to go off? When did this happen? How often has it happened? What can be done to fix it? How soon does it need to be fixed?	Who is the closest to fix it? How quickly can it be fixed? How was this fixed last time? How do I fix this?	Are there any patterns here? How can I improve this for next time? How often did this happen?
Touchpoint What part of the service do they interact with?	Notification outside of the platform (backend)	Dashboard Sensor details page Sensor and people management	Sensor details page Activity's page (comment, mark as resolved, etc.) Promote the resolution as the evidenced change of KPI on Insights page	Generate report Analytics NPS Net promoter score
Customer Feeling What is the customer feeling? <i>Tip: Use the emoji app to express more emotions</i>	😓	🤔	😞	😌
Customer Roles Who is most likely to be using the platform at this time?	Department Head /Manager/Supervisors Operator/Technician/Contractor	Department Head/Manager/Supervisors Operator/Technician/Contractor	Operator/Technician/Contractor	Department Head/Manager/Supervisors Executives

What changes for them?
Outcome

Describe how the life and environment of the customer changes once they used the product or service.

What are they able to do now?

Identify trends and patterns

Set up escalation rules

Find their assets quickly

What can they finally avoid doing?

Waste time trying to identify the source of the issue

Quickly notify and monitor triage from escalations

Avoid being ill prepared to take action on a specific issue.

What changed in their environment?

Real-time notifications

Ability to look at history report

Real-time map of all their sensors
