- Is groups is using rule-based criteria to help manage roles? Groups allow us to marry users with similar permissions/access into the same cohort. This is for example user 1 is admin for one system only (not all)
- **Adding user to a group should update their role to give them permission.** Updating roles shouldn't be done at a user level.
- Do we need to support block sign in ability? yes, in Phase 2+
- Group creation will be in Phase 2
